Sharing your Desktop or Videos in a BlueJeans Class

If you want to share content on your screen you may easily do so if you are on a Windows or Macintosh computer. Look for the Share Screen Button at the bottom of the window (or the content sharing choice on the right). Click it.

You may share your desktop or specific OPEN applications on your desktop. If you share your desktop and you have multiple monitors you can toggle between them. If you share an application it MUST already be open at the time you initiate sharing. The end user will ONLY see the application. Anything else you have open (or your desktop) will not be seen at the remote end. Anyone participating in the meeting may share their desktop. The end user will see the sharer’s screen or application being shared as well as their mouse movements. You are not able to give control of your desktop to anyone else at this time.
When you are ready to stop sharing, click the red button at the bottom.
Moderators and license holders may also share short videos. We recommend the videos get uploaded well before class. (Unfortunately video uploads require running the app to upload. If you are using a desktop machine on campus, one of the LAN people will have to assist you with this.) Videos on a streaming server such as Kaltura, the campus media server, or YouTube will have to be downloaded first to the moderator’s computer and then uploaded into BlueJeans. Of course copyright laws apply. You will not be able to show a video that is playing directly from a streaming server; the video files MUST be uploaded into BlueJeans. For additional assistance with showing videos please contact me.
